

Ethan Dolder

### Final Web Application

1. I used less to apply and maintain a consistent color scheme with ease throughout development of the Web App. I assigned unique colors to Less variables.
2. Achieving responsiveness involved adding media breakpoints, changing the menu to a hamburger menu for mobile devices, and resizing fonts when needed.
3. The rationale behind the favicon was largely inspired by Purdue's themes. Their font styles and signature colors were used.
4. I used
  - a. Accordion- displays general CIT information.
  - b. Modals- displays quadrant-specific information like career paths and degrees.
  - c. Buttons- triggers modals display
  - d. Alert- shows high demand job markets.
